

simple ransomware
by MIT ai2 inventor

Summary

- How the app work
- Technical details
- Bottleneck
- demo

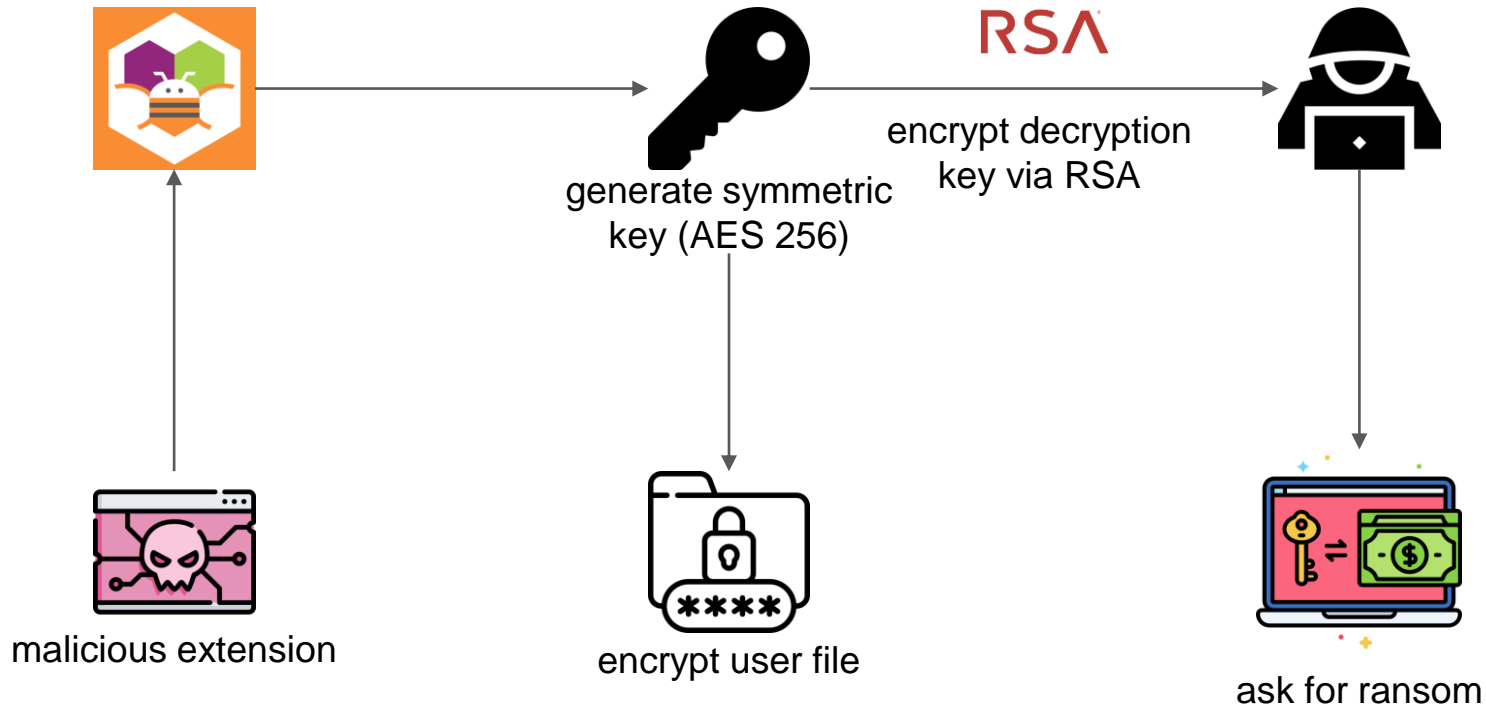

Function of the app is as below

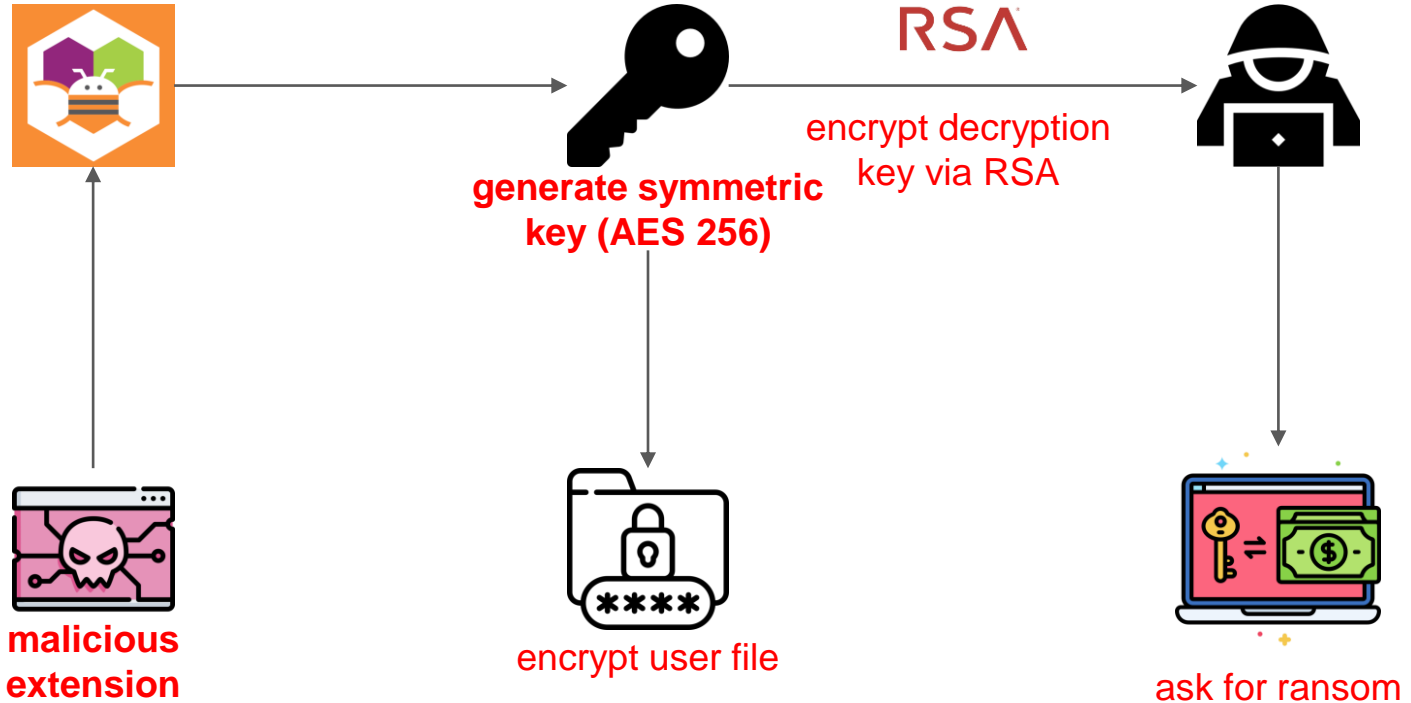

Still not understandable?
Here's an easy way to understand

Technical details in a simple graph

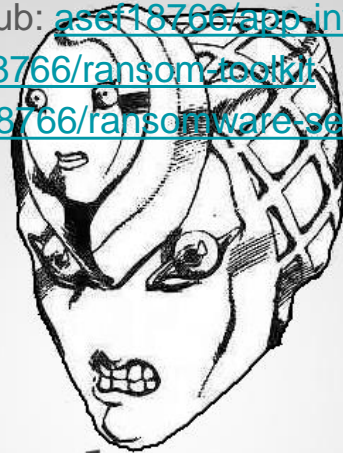

ALL PROBLEMS HAVE BEEN SOLVED

Bottleneck(not really as all issues were conquered)

- many android/Linux/VM relative issue, but all was conquered
- for those who ~~wants~~ want to dig in...
 - please visit the project page on my github :P
 - enviroment set up & aix stub: [asef18766/app-inventor-ransom](https://github.com/asef18766/app-inventor-ransom)
 - ransomware toolkit: [asef18766/ransom-toolkit](https://github.com/asef18766/ransom-toolkit)
 - ransomware server: [asef18766/ransomware-server](https://github.com/asef18766/ransomware-server)
 - [ransom payment system](#)

It just works
